Onboard washout system

# Manufacturing experts

Jonesco are the trusted brand for commercial vehicle suppliers across the globe.

Our story began in 1967 on Adelaide Street near Preston city centre in the UK. It is safe to say we have grown a bit since then.

Doing things better is why Jonesco exists. It is why we deliver the products you need, whenever and wherever you need them. Working Smarter. Not harder. Our rotationally moulded products can be found worldwide and our uncompromising commitment to quality means they are made to last.

Jonesco's headquarters are in Preston, Lancashire, UK with a subsidiary in Seclin, France. Our chain of distribution covers over 60 countries and spans every continent. We're truly global but we've not lost our family touch.

# Environmental issue

It's essential for concrete suppliers to consider how they wash out their vehicles and properly handle and dispose of alkaline washout water.

It is no longer acceptable to wash out directly onto the ground. Not only does this cause real environmental contamination every time, but there is a high risk of financial penalty through increasing enforcement action, as well as the potential negative public image.

Not every site, especially tight inner-city sites, will have wash-out facilities available and busy ones may have a queue of vehicles waiting. So, in addition to the hose and tank you already carry, it makes sense to add equipment to the vehicle that will collect the wash-out water quickly and conveniently.

# The Solution

A lightweight, polyethylene washout system, carried on the vehicle and used at the point of concrete delivery.

The unique design of the [AwayWash](#) collects the washout water from the chute and separates the coarse material from the water. The alkaline washout water is taken away for recycling or to an appropriate disposal point and the retained aggregate can be reused or recycled.

Available in two sizes to suit many concrete mixer configurations.

# Product highlights

- Easy to clean and maintain
- Avoid ground contamination
- Catch and reuse washout water
- Available in two sizes, 45 or 55 litres
- Comply with on-site washout policies
- Detachable and replaceable drain hose.
- Simple, removable sieve to separate aggregate

# Benefits

- Lightweight design
- Competitive advantages
- Permanent onboard solution
- Long-lasting life
- Intuitive and uncomplicated system
- 100% recyclable polyethylene
- Removes the risk of water pollution
